

LifePage - Repo Summary

Single-page summary based only on repository evidence as of March 31, 2026.

What It Is

LifePage is an AI personal brand builder that turns URLs and other proof into a public portfolio site and resume output. The repo shows one product that combines evidence import, profile generation, publishing, billing, and supporting automation.

Who It's For

Primary persona: creators, students, job seekers, and builders who want a proof-backed personal site without hand-writing every section.

What It Does

- Imports multiple URLs and expands Google Sites pages into evidence items.
- Crawls pages, extracts metadata/body text, and captures screenshots.
- Uses AI to generate structured profile data, resume bullets, stats, and timeline content.
- Publishes public pages at `/u/[username]` with privacy and visibility controls.
- Exports resume PDFs and supports separate portfolio/resume presentation presets.
- Handles billing, custom domains, and inline project demo videos.
- Includes agent tools and scheduled automations for refresh/regeneration workflows.

How It Works

- **UI:** Next.js App Router pages for landing, auth, dashboard, explore, public profile, and resume views.
- **API:** Route handlers for crawl, generate, agent, resume, billing, settings, automations, domains, and project videos.
- **Data:** Prisma + PostgreSQL models store users, evidence, generated profiles, page settings, Stripe state, automations, and agent artifacts.
- **Flow:** URL input -> crawl + screenshot -> **EvidenceItem** rows -> AI generation -> active **GeneratedProfile** -> public page/resume render. Stripe, Cloudflare SaaS/R2, and OpenNext/Workers extend billing, domains, storage, and deploy.

How To Run

1. **npm install**
2. **cp .env.example .env.local**
3. Set at least **DATABASE_URL**, auth secrets/URLs, and **OPENAI_API_KEY**. Stripe/Cloudflare values are only needed for those features.
4. **npx prisma generate && npx prisma migrate dev --name init**
5. **npm run dev** and open **http://localhost:3000**

Tech Used

Next.js 16, React 19, TypeScript 5.9, Tailwind CSS 4, Prisma 7, PostgreSQL, NextAuth 5, OpenAI API, Stripe, Cloudflare Workers/R2/SaaS, and Playwright.
